## RESEARCH INTERESTS

---

I am dedicated to advancing **recommender systems** by leveraging cutting-edge AI techniques, emphasizing critical challenges beyond mere accuracy – such as diversity, calibration, and fairness.

Currently, my research focuses on developing effective and practical **conversational recommender systems (CRS)**. Specifically, I am creating visually-aware CRS using large language and vision models and investigating the fairness of LLM-based CRS to deliver equitable and precise recommendations across diverse user groups.
