RESEARCH INTERESTS

My research focuses on advancing **recommender systems (RecSys)** through the application of cutting-edge AI techniques. My previous and ongoing work can be summarized as follows:

- **Conversational RecSys.** Researched practical conversational recommendation [A1, C10] and am currently developing visually-aware conversational recommender systems using large vision-language models to enhance multimodal personalization.
- **Sequential RecSys.** Developed effective sequential recommender systems [C9, C5, C3, J3] and am currently enhancing Transformer-based models to improve their effectiveness in sequential recommendation tasks.
- **RecSys Beyond Accuracy.** Extended recommender systems beyond mere accuracy by targeting diversity, calibration, robustness, and other practical metrics [C9, C8, C7, C6, C4, C1].
